AIR COOLED CHILLERS WITH INVERTER SCREW COMPRESSORS

i-FX-G04

AIR COOLED CHILLERS WITH INVERTER SCREW COMPRESSORS AND HFO REFRIGERANT FROM 377 TO 1463 kW

r HFO 1234ze

TOTAL INVERTER TECHNOLOGY

climaveneta.com

CLIMAVENETA®

i-FX-G04

THE GREEN IMPERATIVE CHILLER FOR THE HIGHEST EFFICIENCY

EER up to 3,36

SEER up to 5,32

ErP 2021 COMPLIANT

EUROVENT CERTIFIED PERFORMANCE www.eurovent-certification.com

Air cooled chiller with inverter screw compressors and HFO 1234ze refrigerant. From 377 to 1463 kW

i-FX-G04 is the eco-friendly and high performing chiller that matches full inverter technology with green HFO refrigerant.

Dedicated to comfort applications – from small retail projects to large commercial and district cooling schemes, the new air cooled chiller with full inverter screw compressors meets the highest efficiency targets required by modern buildings, at the same time delivering a green approach to any centralized air conditioning system.

LEADING INVERTER TECHNOLOGY

TOTAL INVERTER TECHNOLOGY

The new i-FX-G04 showcases the latest variable speed technology applied on:

- dual screw compressors with integrated refrigerant cooled inverter motor and variable Vi technology
- high efficiency variable speed fans
- integrated variable speed hydronic modules (opt.)

THIS INCREDIBLE PERFORMING CHILLER ADJUSTS THE ROTATIONAL SPEED AND THE INTERNAL GEOMETRY TO:

- perfectly match the cooling load of the plant in any condition
- offer stepless and accurate capacity control
- ensure premium efficiency values, thus cutting operating costs

UNCOMPROMISED EFFICIENCY

A

2021 ECODESIGN DIRECTIVE COMPLIANT

Thanks to the latest variable speed technology applied both on the compressors and on the fans, i-FX-G04 achieves uncompromised part load efficiency values.

The new family exceeds the strictest 2021 Ecodesign Directive tier, placing it on the top level of the market.

EXTENDED OPERATING RANGE

+55°
-15°

Wide operating range, working with outdoor air temperatures from -15°C up to +55°C thanks to specifically developed options and smart control logics.

ACOUSTIC VERSIONS

-	**Standard**	Unit with standard compressor's enclosures.	**Baseline**
		Unit with noise reducer kit (Opt. 2315).	**-3 dB(A)**
SL	**Super low noise**	The highest level of noise reduction which cuts noise emissions down to -9dB(A),without compromising the unit's efficiency.	**-9 dB(A)**

HEAT RECOVERY CONFIGURATIONS

-	**Standard unit**	Unit for the production of chilled water.
D	**Partial heat recovery**	Unit for the production of chilled water, equipped with an auxiliary heat exchanger on the compressor discharge for superheat recovery.

ALL-ROUND SUSTAINABILITY

r HFO 1234ze

i-FX-G04 is the result of Mitsubishi Electric Hydronics & IT Cooling Systems' extensive approach to sustainability.

Achieving outstanding performance and ensuring long-term sustainability are challenges that modern HVAC systems need to tackle.
Increasing concerns about the global warming impact of chillers and heat pumps is driving new regulatory policies to push towards even more efficient units with the lowest carbon footprint.
Today, an all-round approach is the only way to effectively reduce the Total Equivalent Warming Impact (TEWI).

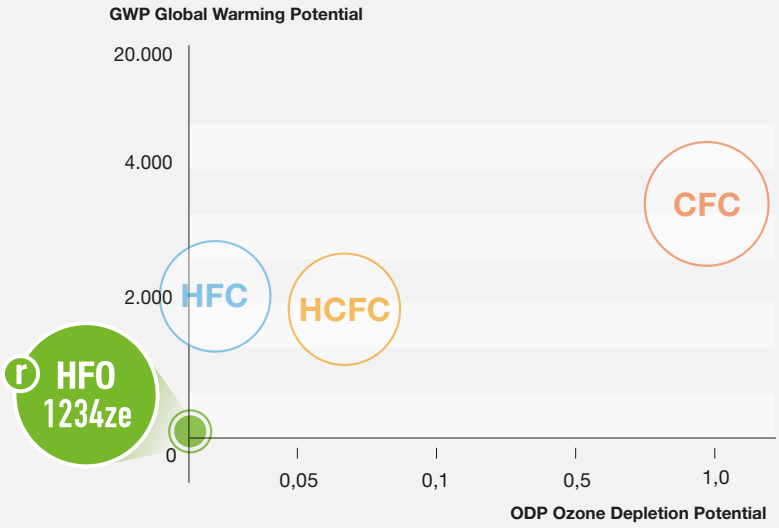
Fully committed to support the creation of a greener tomorrow, Mitsubishi Electric Hydronics & IT Cooling Systems designed i-FX-G04, a complete chiller range optimized for HFO refrigerant R1234ze, with nearly zero environmental impact.

Combining brilliant annual efficiency with the use of a low GWP refrigerant, i-FX-G04 tackles both the indirect (due to the primary energy consumption) and the direct global warming impact, thus resulting the perfect choice for any new, forward-looking cooling system.

The environmental impact of the refrigerants is measured by two parameters:

- **ODP:** Ozone Depletion Potential
- **GWP:** Global Warming Potential

While in the past the focus was on reducing ODP values to 0, new regulations encourage Member States to work harder on GWP.



The path to a greener world

Starting from the 70s, several international agreements have been made to drive the industry towards eco-friendly refrigerants.
The last crucial step was taken in 2016, when the Kigali Amendment to the Montreal Protocol was passed, paving the way for the global phasedown of HFCs.

- **1977** World Plan of Action on the Ozone Layer
- **1987** Montreal Protocol
- **1997** Kyoto Protocol
- **2006** EU F-gas regulation
- **2016** Kigali Amendment to The Montreal Protocol

QUICK&EASY INSTALLATION AND MAINTENANCE

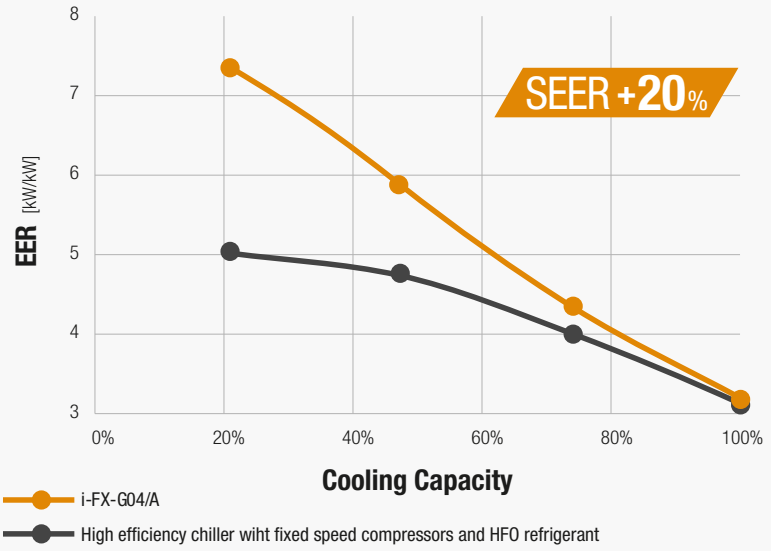
A vast array of already mounted options together with a smart unit design for quick and easy installation and maintenance operations.

HIGH DEGREE OF CONFIGURABILITY

Always the right solution for every project thanks to many specifically developed versions and a bespoke list of options (e.g. the integrated hydronic modules, several water flows controls).

FULL INVERTER TECHNOLOGY

HIGHER ENERGY EFFICIENCY



The increase in efficiency compared to high efficiency ErP 2018 compliant fixed speed units is expressed by drawing the EER trend to the conditions defined by the ErP directive 2009/125 /EC necessary for the calculation of SEER seasonal parameters.

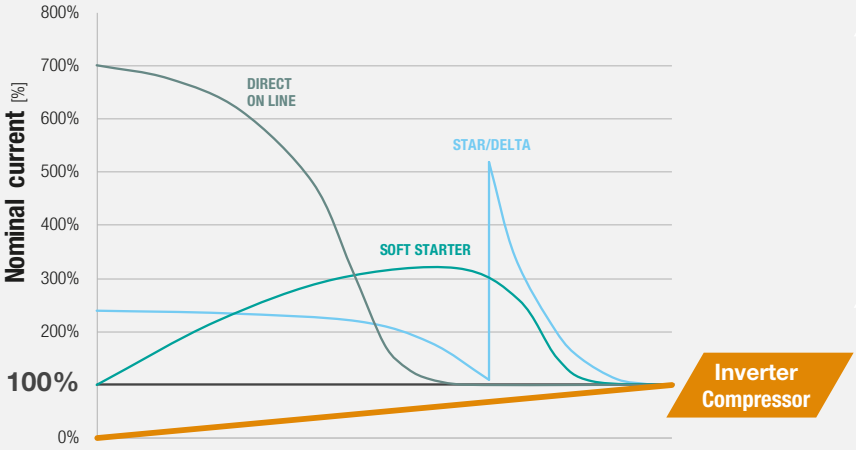
ErP 2021 COMPLIANT

In most of cases, in comfort applications units are working at full load only for a very few hours every year.

This means that most of the time the units are working partialized. In this condition the inverter and variable Vi technology makes the real difference in terms of efficiency, even compared to the latest generation high efficiency fixed speed units.

ABSENCE OF IN-RUSH CURRENTS

The inverter technology involves a start-up phase with very low in-rush current. The frequency converters chosen by Mitsubishi Electric are characterized by values of Displacement Power Factor of between 0,97 and 0,99.



No electrical and mechanical stress

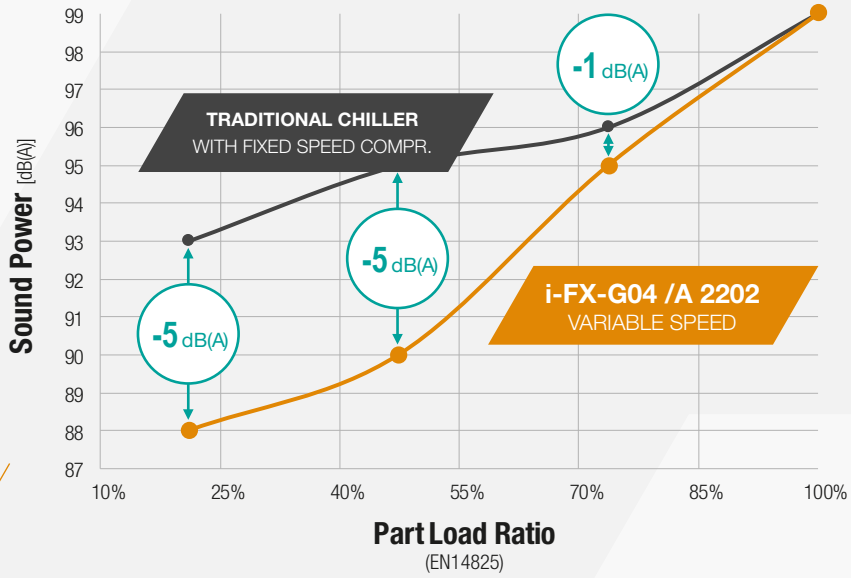
The unit never exceeds the nominal current, not even when starting up.

No additional equipment needed

Such as star/delta commuters or soft starters in order to reduce the in-rush currents.

The new i-FX-G04 chillers apply variable speed technology in all of its main components, achieving top-level performances in any load condition.

REDUCED SOUND POWER LEVELS



LOWER SPEED, LOWER NOISE

The unit working in partial loads is far more silent than a fixed speed compressor unit.

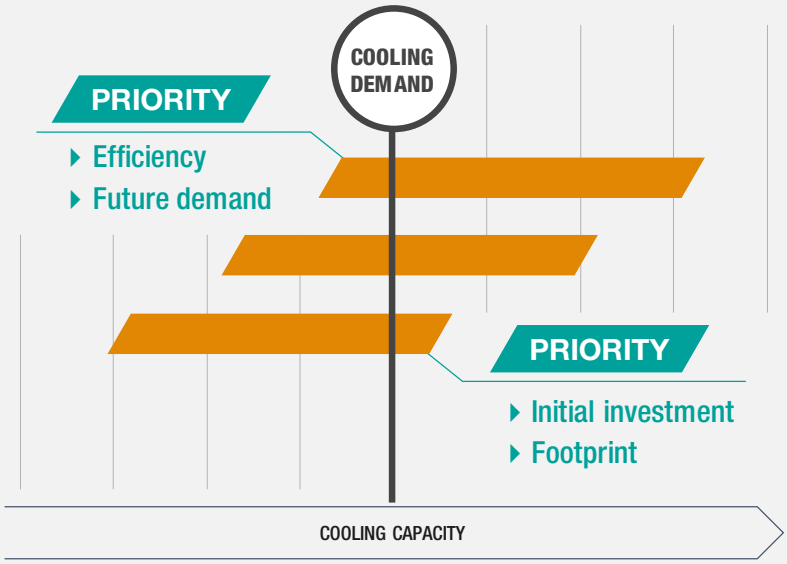
In applications with units working at part load for most of the year, i-FX-G04 ensures extremely low noise operations down to -5dB(A).

Ideal for sound sensitive environments

- Museums and Theatres
- Hospitals
- Institutions
- Hotels

FLEXIBLE SELECTION

The smart design of the units combined with the ELCAWorld selection software allows you to always choose the right unit for every project, prioritizing efficiency, additional future plant demands or reducing the initial investment and the footprint.



Choose YOUR target

- EFFICIENCY
- INITIAL INVESTMENT
- FOOTPRINT
- FUTURE PLANT DEMANDS

TECHNOLOGICAL CHOICES

W3000TE CONTROL

Fully in-house developed management software.

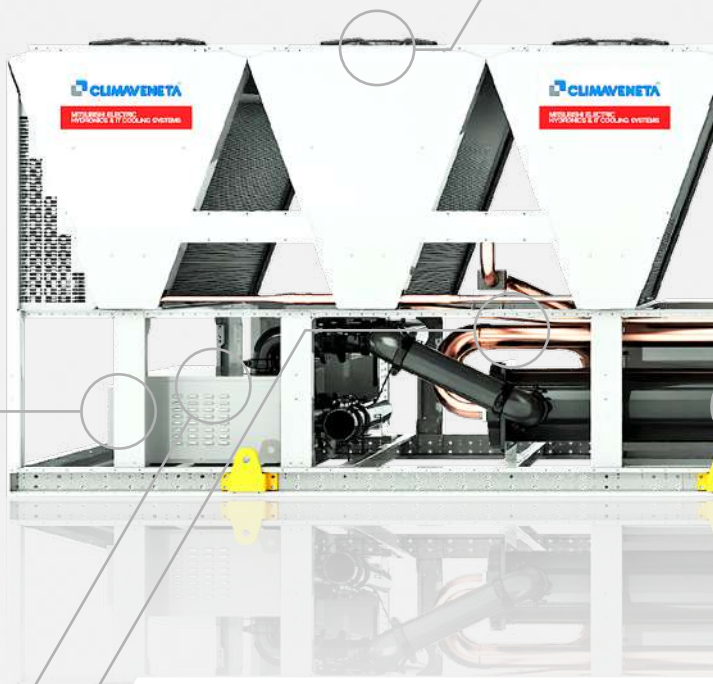
- Efficient and reliable operation in all conditions
- Connectivity with the most commonly used BMS protocols (Opt.)

KIPlink USER INTERFACE

Innovative Wi-Fi interface for an easy and enhanced unit management.

Variable speed fans

High performing EC fans, for higher efficiency and continuous speed modulation



Built-in pump group (Opt.)

Factory-mounted pumps and pre-plumbed hydraulic components, for minimum on-site installation time, work, and cost.

- Fix speed and variable speed pumps available, with low or high head
- Electronic primary flow controls for constant pressure or constant temperature

Gas detector device

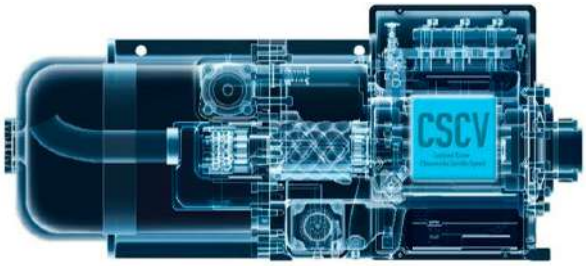
Included as standard for each refrigerant circuit. In case of refrigerant leak detection, this device raises an alarm.

Refrigerant circuits

One **independent refrigerant circuit** per compressor, to grant **reliability** and easy maintenance. **Compressor enclosures are supplied as standard** in all versions.

CSCV Compressors
Engineered for R1234ze refrigerant

Inverter, Variable Vi dual rotor screw compressors, designed according to Mitsubishi Electric Hydronics & IT Cooling Systems specifications and for its' exclusive use.



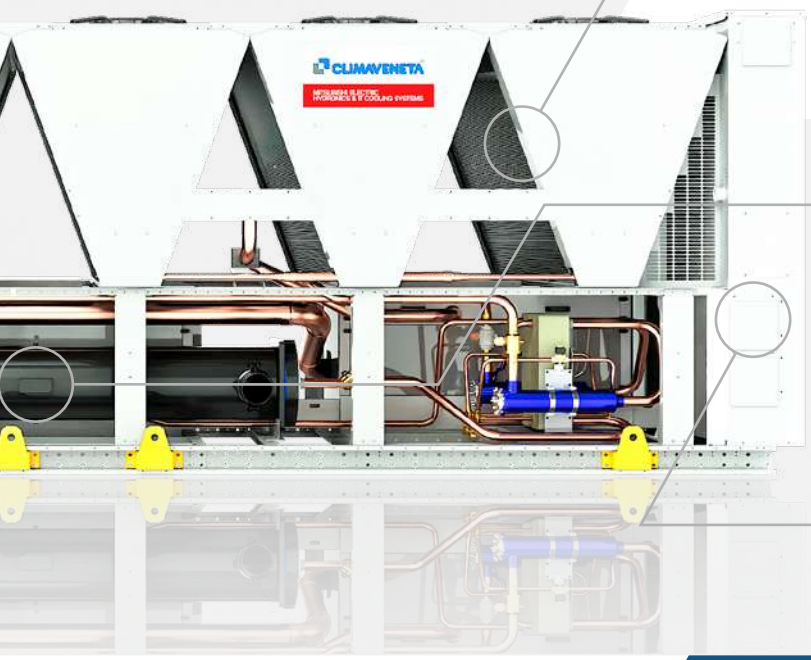
Trusted reliability, simplified installation, maximized performance: i-FX-G04 improves the already high performance of the fixed speed chiller range adding new exceptional features.

r HFO 1234ze

Micro-channel coils

New generation full aluminum micro-channel coils, ideally positioned on a “V” block structure to optimize airflow and heat transfer.

- Up to 30% of refrigerant charge reduction vs. traditional tube and fin coils.
- Long Life Alloy (LLA) for higher corrosion resistance and longer life cycle
- Protective coating available for harsh industrial and marine evironments (Opt.)



HFO refrigerant

4th generation refrigerant HFO 1234ze, with negligible greenhouse effect and zero impact on the ozone layer.

Negligible GWP

HFO 1234ze $GWP_{100\ year} < 1$

(R134a $GWP_{100\ year} = 1300$)

GWP values according to IPCC rev. 5th

Rapid molecule disintegration in the atmosphere

HFO 1234ze = 2 weeks

(R134a = 14 years)

Approved by international standards

ASHRAE 34, ISO 817:

A2L classification (non toxic, mildly flammable)

Compatible with common construction materials

No special components

No extra cost

In-line with environmental regulation objectives

No future retrofit required

Shell and tube evaporator

Dry expansion, single pass shell and tube evaporator, fully developed by Mitsubishi Electric Hydronics & IT Cooling Systems.

- Internally grooved copper tubes for enhanced heat exchange
- Low pressure drops
- Fully protected against ice formation

Electrical panel

Large electrical panel with power circuit components and control main board.

- Forced-air cooling system

SMART VARIABLE Vi LOGIC

Variable Speed Drive

Integrated and compact frequency converter, refrigerant cooled, for outstanding seasonal efficiency and wide capacity regulation.

Automatic internal volume ratio adaption

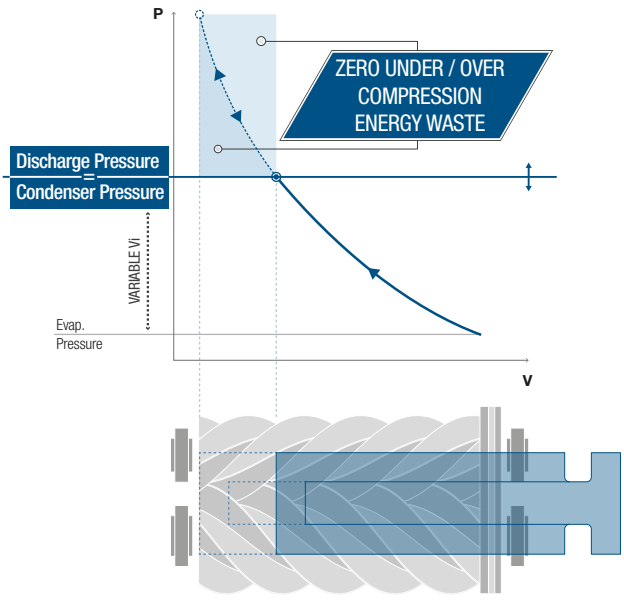
Obtained thanks to an integrated Vi slider which adapts the internal geometry to the current operating condition, thus ensuring the best efficiency.

Extra durability achieved thanks to dedicated components:

- Envelope control function, 3-stage warning and alarm system, safe-torque-off function.
- Carbon steel bearings granted for a lifetime of over 150.000 hours.

High efficiency high speed motor

For unprecedented full and part load efficiencies and extremely wide and accurate capacity regulation.



CLIMAVENETA

CORE FEATURES FOR ALL YOUR EQUIPMENT NEEDS

W3000TE control and KIPlink innovative interface

The logic behind i-FX-G04 is the W3000TE control software. Characterized by advanced functions and algorithms, **W3000TE features proprietary settings** that ensure faster adaptive responses to different dynamics, in all operating modes. Direct control over the unit comes through the innovative KIPlink interface.

Based on Wi-Fi technology, **KIPlink** gets rid of the standard keyboard and **allows one to operate on the unit directly from a mobile device** (smartphone, tablet, notebook).

Easier on-site operation

Monitor each component while moving around the unit for maintenance operations. View and change all parameters with easy-to-understand screenshots and dedicated tooltips. Get devoted “help” message for alarm reset and trouble shooting.

Real-time graphs and trends

Monitor the immediate labor status of the compressors, heat exchangers, cooling circuits and pumps.
View the real-time graphs of the key operating variable trends.

Data logger function

View history of events and use the filter for a simple search. Enhance diagnostics with data and graphs of 10 minutes before and after each alarm.
Download all the data for detailed analysis.

How to access the unit with KIPlink

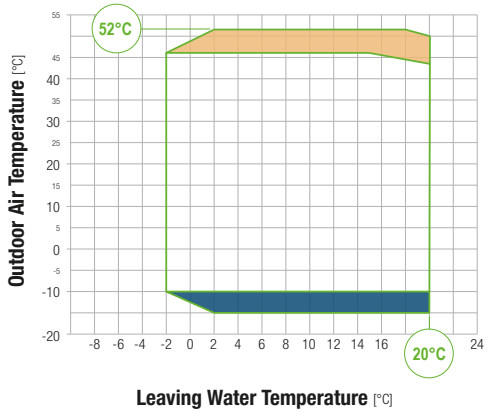
Direct access to the W3000TE control is achieved by scanning the QR-code positioned on the front side of the i-FX-G04 unit.

LED switch

The three-colour LED button positioned on the electrical board allows the user to switch the unit on/off and visualize the genaral status of the equipment without using any mobile device.

In addition (Opt. 1442, 1444) or in substitution (Opt. 6194, 6195) to the KIPlink, i-FX-G04 can be provided with: a 7” color touch screen interface or with a keyboard with large display and LED icons. In these cases, the LED switch is not provided. Remote keyboard is possible (Opt. C9261063, C9261064, C926108911, C926108913).

EXTENSIVE OPERATING LIMITS



A VERSION (High Efficiency)

FULL LOAD OPERATION

- Standard unit
- Required: HT kit (Opt. 1955)
- Required: Low temp. device DBA (Opt. 813)

Air temp. < -10°C
Double insulation on heat exchangers (Opt. 2631)

LWT < 0°C
Compressor liquid injection (Opt. 871)

PARTIAL LOAD OPERATION

In case of higher outdoor air temperature, i-FX-G04 automatically partializes its resources to ensure uninterrupted operation. Operating limits when working partialized (water */7°C):

/A /SL-A 55°C

Climaveneta brand products have always been synonymous for best in class performance and high versatility. This is particularly true for i-FX-G04, the innovative chiller where all the features have been designed for complete customer peace of mind.

Hydronic modules and flow controls

i-FX-G04 units come equipped **as standard** with **terminal and modulating signal (0-10V)** to control the activation and speed of one external variable speed pump, with the internally developed **VPF.E** control logic, which **adjusts the pump speed** on the basis of the **plant's thermal load**, in order to **maintain the defined plant-side ΔT** (primary circuit).

Factory-mounted pump group

2 pumps (duty/standby) provide low or high head
(available head approx. 100 or 200 kPa)

Fixed speed pumps
1 pump, 2-pole motor: Opt. 4706 (LH) / 4707 (HH)
2 pump, 2-pole motor: Opt. 4711 (LH) / 4712 (HH)
2 pump, 4-pole motor: Opt. 4708 (LH) / 4709 (HH)

Variable speed pumps
1 pump, 2-pole motor: Opt. 4717 (LH) / 4718 (HH)
2 pump, 2-pole motor: Opt. 4722 (LH) / 4723 (HH)
2 pump, 4-pole motor: Opt. 4719 (LH) / 4721 (HH)

Terminals for external pump control

The unit controls the activation or the activation and speed of 1 or 2 external pumps.

Terminals + Modulating signal
1 pump: Standard
2 pumps: Opt. 4714

These arrangements allow you to control the activation / deactivation of fixed speed pumps too!

Other possible variable primary flow control logics:

VPF control logic

The VPF control series (Variable Primary Flow) doesn't only **adjust the pump speed on the basis of the plant's thermal load**, but also **dynamically optimizes the unit's thermoregulation** for variable flow operation, thus ensuring both the highest pump energy savings and chiller stable operation.

VPF: constant ΔP on the plant side
For systems with only the primary circuit.
Opt. 4864 or 4865 for single unit system
Opt. 4866 for multi-unit system

VPF.D: constant ΔT on the plant side
For systems with primary and secondary circuits separated by a hydraulic decoupler.
Opt. 4867 for single unit system
Opt. 4868 for multi-unit system

Close-coupled pumps by Grundfos

SiC/SiC (silicon carbide) primary seal pairing, extremely resistant against wear, abrasive particles and wear.

EPDM bellows seal prevent the risk of deposits, such as rust, on the shaft.

Pull-out design: during maintenance the power head can be pulled out without removing the pump housing from the pipework.

In-line or end-suction models were chosen based on dimensions and performances

WITNESS TESTING

Test your chiller before installation and make sure its' performance is totally reliable.

Performance WITNESS TEST

Performance Witness testing is available as additional service in order to allow the final user to see the unit being tested under specific conditions. Carried out within modern and sophisticated facilities, this service gives the customer the possibility to choose among different witness test options in order to:

- Verify unit operation under severe conditions
- Detect sound emissions
- Check performance, both at full and partial loads
- Test the unit with low outdoor air temperature operation
- Time the fast restart

All the flexibility you need to fit the most diverse application requirements

FURTHER OPTIONS

Auxiliary input

4-20 mA (Opt. 6161): Enables remote set-point adjustments (analog input).
Double set-point (Opt. 6162): Enables the remote switch between 2 set-points (digital input).
Demand limit (Opt. 6171): Limits the unit's power absorption for safety reasons or in temporary situations (digital input).

Electrical

Automatic circuit breakers for all major electrical loads (compressors excluded) (Opt. 3414):
Protect all the major electrical loads (compressors excluded) from possible current peaks, over-current switches are provided in place of the standard fuses. The compressors are already protected by extra-fast fuses.

Connectivity

Serial card interface module to allow integration with BMS protocols:
Modbus (Opt. 4181) / LonWorks (Opt. 4182) / BACnet MS/TP (Opt. 4184) / BACnet over IP (Opt. 4185)
M-Net interface kit (Opt. 4187): Interface module to allow the integration of the unit with Mitsubishi Electric proprietary communication protocol M-Net.

Energy Meter

Energy meter for BMS (Opt. 5924): Acquires electrical data and the power absorbed by the unit and send them the BMS for energy metering (Modbus RS485).

Refrigerant circuit

Dual pressure relief valves with switch (Opt. 1961): One valve is isolated from the refrigerant circuit while the other is in service. The user can work on the isolated valve for periodic maintenance or replacement, without removing the refrigerant from the circuit.
Compressor suction valve (Opt. 1901): Installed on each compressor suction line, it simplifies maintenance activity (discharge valves are present as per standard).

Refrigerant leak detector

Leak detector + compressor off (Opt. 3433): Factory installed device.
In case of a gas leak detection it raises an alarm and stops the units.

Hydraulic

Water flow switch (Opt. 1801): Designed to protect the unit where the water flow across the evaporator is not sufficient and falls outside of the operating parameters.
Delta T > 8°C (Opt. 2881): Evaporator designed to operate with low primary circuit water flow.
Flanged hydraulic connections (Opt. 2911): Grooved coupling with flanged counter-pipe.

Structure

Anti-intrusion grilles (Opt. 2021): Perimeter metal grilles to protect against the intrusion of solid bodies into the unit structure.
Rubber type (Opt. 2101) or spring type (Opt. 2102) anti-vibration mountings: Reduce vibrations, keeping noise transmission to a minimum.

Packing

Reinforcing bars (Opt. 1971): Steel brackets used to strengthen the unit structure.
Suggested in case of long truck transport.
Nylon packing (Opt. 9966): i-FX-G04 is covered with a protective nylon layer and provided with the lifting eye-plates, to load the unit into a truck.
Container packing (Opt. 9979): i-FX-G04 is covered with a protective nylon layer, provided with structural reinforcing bars and equipped with both lifting eye-plates and handling devices to load it on a container (metal slides, front handling bar).

Notes:
1 Plant (side) cooling exchanger water (in/out) 12°C/7°C; Source (side) heat exchanger air (in) 35°C.
2 Values in compliance with EN14511-3:2013.
3 Average sound pressure level at 10m distance, unit in a free field on a reflective surface; non-binding value calculated from the sound power level.
4 Sound power on the basis of measurements made in compliance with ISO 9614.
5 Sound power level in cooling, outdoors.
6 Unit in standard configuration/execution, without optional accessories.
7 Parameter calculated according to [REGULATION (EU) N. 2016/2281]
8 Seasonal energy efficiency ratio
9 Seasonal space cooling energy efficiency

The units highlighted in this publication contain HFO-1234ze [GWP_{100} 7] fluorinated greenhouse gases.

Certified data in EUROVENT

“BY FAR THE BEST PROOF IS EXPERIENCE”

Sir Francis Bacon
British philosopher (1561 - 1626)

DE BIJENKORF AMSTERDAM

2018 Amsterdam - Netherlands

Retail

Cooling capacity: 415 kW
Installed machines:
1x FX HFO SL-A screw compressor chiller with HFO refrigerant

GABBANA

017 Windhof - Luxembourg

Office buildings

Cooling capacity: 386 kW
Installed machines:
1x FX-FC HFO/NG/SL-T+/S screw compressor chiller with HFO refrigerant

Watermark Livingston Business Park

2017 Livingston - Great Britain

Office Buildings - Mixed-Use Development

Cooling capacity: 1412 kW
Installed machines:
3x TECS HFO oil-free compressor chillers with HFO refrigerant

Soclima

2017 Foetz – Luxembourg

Office building

Cooling capacity: 1016 kW
Installed machines:
1x FOCS2-W HFO screw compressor chiller with HFO refrigerant,
1x TECS2-W HFO oil-free compressor chiller with HFO refrigerant

Every project is characterised by different needs and system specifications for various climates. All these projects share high energy efficiency, maximum integration, and total reliability resulting from the Climaveneta brand experience.

UEFA

2017 Nyon - Switzerland

Sport structures

Cooling capacity: 512 kW
Installed machines:
2xFOCS2-W HFO /R /CA-E screw compressor chillers with HFO refrigerant

Siemens

2017 Zurich - Switzerland

Office Building

Cooling capacity: 1015 kW
Heating capacity: 1340 kW
Installed machines:
2x FOCS2-W HFO screw compressor chillers with HFO refrigerant

Hotel Atlantic

2017 Stavanger - Norway

Hotel and resorts

Cooling capacity: 675 kW
Installed machines:
2x FOCS2-W HFO screw compressor chillers with HFO refrigerant

Genève Plage

2015 Geneve - Switzerland

Sport structures

Heating capacity: 700 kW
Installed machines:
2x TECS2-W HFO oil-free compressor chillers with HFO refrigerant
